DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Huey (3,727,309). Huey shows a denture comprising a u-shaped tray 28 including outer walls, inner walls, a channel between the inner walls, a flange formed by the meeting of the inner and outer walls, and a tooth receiving portion. A plurality of teeth 10 are located in the tooth receiving portion and the denture also comprises a layer of gum receiving material 50 applied to the inner walls and flange. The gum receiving member is deformable when subjected to a temperature of about 140-150 degrees F, the gum receiving member conforming to the configuration of a gum received within the member column 6, first paragraph).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Application/Control Number:

10/751,076 Art Unit: 3732

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 7, 10-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hazar (4,017,971) in view of Jeffer (5,678,993). Hazar teaches a method for fitting a denture in situ in the mouth of an individual comprising the steps of selecting the denture 10 to fit the individual, the denture comprising a tray including outer walls, inner walls, a channel 16 between the inner walls, a flange, the flange formed by the meeting of the inner and outer walls, the tray being generally U-shaped and having a tooth receiving portion. A plurality of teeth 12 are in the tooth receiving portion. A layer of gum receiving material 22 is applied to the inner walls and the flange, forming a gum receiving member. The gum receiving member is deformable when subjected to a temperature greater than the ambient temperature but less than 100 degreess C (column 6, lines 43-45). The method also includes the steps of heating the denture in water having a temperature greater than the ambient temperature but less than 100 degrees C (column 5, lines 52-54), positioning the denture within the mouth with the gum in the gum receiving member, and fitting the denture so that the gum receiving member conforms to the gum (column 5, lines 54-61). Hazar does not teach the use of a biting force to fit the denture. Jeffer teaches a method of forming a denture and liner wherein a biting force is applied to the denture to form the denture to the impression of the gum (column 5, lines 21-25). It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a biting force to form the gum receiving member of Hazar, in view of Jeffer, in order to provide a more accurate fit of the gum receiving member.

Application/Control Number:

Art Unit: 3732

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Huey (3,727,309) in view of Winnberg (2,752,680). Huey shows a denture comprising a ushaped tray 28 including outer walls, inner walls, a channel between the inner walls, a flange formed by the meeting of the inner and outer walls, and a tooth receiving portion. A plurality of teeth 10 are located in the tooth receiving portion and the denture also comprises a layer of gum receiving material 50 applied to the inner walls and flange. The gum receiving member is deformable when subjected to a temperature of about 140-150 degrees F, the gum receiving member conforming to the configuration of a gum received within the member column 6, first paragraph). The denture of Huey does not lack a palate. Winnberg shows an upper denture that does not have a palate. This palateless denture takes up less room to leave more room for the tongue and a reduction of the tasting capacity would be avoided. It would have been obvious to one of ordinary skill in the art at the time the invention was made to form the denture of Huey without a palate, in view of Winnberg, in order to provide more room in the mouth and reduce the chance of changing the perception of taste.

Response to Arguments

Applicant's arguments filed December 30, 2004 have been fully considered but they are not persuasive. In response to applicant's argument that Huey does not teach submerging the denture in water greater than ambient temperature but less than 100 degreess C, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to

Application/Control Number:

10/751,076

Art Unit: 3732

patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

Applicant's arguments with respect to claims 7 and 19 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cary E. O'Connor whose telephone number is 571-272-4715. The examiner can normally be reached on M-Th 7:00-3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Shaver can be reached on 571-272-4720. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
